

## **1. How do we find out which EHRs have a reliable ICD-10 crosswalk?**

Each EHR will have a unique process for developing its crosswalks so you will need to contact your vendor to determine how theirs will be developed. You will also want to work with your vendor to customize your list of codes to include those most frequently used in your practice.

AAN coding experts advise that you not rely on crosswalks, but rather encourage your coders to familiarize themselves with the specific subset of codes most commonly utilized in your practice.

The AAN has created [crosswalks](#) from ICD-9 to ICD-10 for 10 commonly reported neurologic diagnosis codes. The AAN has also created a [list of questions](#) to help you assess the preparedness of your EHR vendor.
